EDUCATION

Wilfrid Laurier University

Waterloo, ON

Bachelor of Science, Computer Science with Management Option

Expected Apr 2029

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Linear Algebra, Calculus II

EXPERIENCE

Career Education Council

Remote

App Development Intern

Feb 2024 – Jun 2024

- Developed **Scholar's Spark**, a fully functional iOS application using Swift and Xcode, connecting students to curated academic resources
- Collaborated with stakeholders to gather and translate requirements into functional app features, delivering a polished end-to-end product
- Conducted testing and debugging to resolve logic errors and improve application stability prior to deployment

St. Edmund Campion Secondary School

Brampton, ON

Technical Lead & Workshop Facilitator — App Dev Club

Sep 2023 – Apr 2025

- Led technical operations for a 5-person development team, coordinating timelines and resolving software and infrastructure blockers
- Delivered Swift programming workshops to 30+ students, creating curriculum and serving as the primary technical point of contact
- Implemented a cloud-based file distribution system to resolve network access restrictions for 30+ club members

PROJECTS

Omni Architect | *Python, LangGraph, LangChain, Groq API, Local LLMs, REST APIs* | [GitHub](#) Feb 2026 – Mar 2026

- Built a multi-agent AI orchestration system routing complex queries across specialized agents using LangGraph's state machine architecture
- Integrated Groq API for ultra-low latency LLM inference and LangChain for tool-calling, agent memory, and context management
- Designed agent coordination logic supporting both cloud inference and local LLM deployment for fully offline execution

Geometry Dash RL Agent | *Python, Reinforcement Learning, ANN, Reward Shaping* | [GitHub](#) Jan 2026 – Present

- Trained an autonomous AI agent to play Geometry Dash using reinforcement learning and a custom-designed artificial neural network
- Implemented real-time game state parsing and custom reward shaping to drive progressive improvement across increasingly difficult levels
- Achieved consistent autonomous level completion through iterative training loops and hyperparameter tuning

ML Stock Simulator | *Python, PyTorch, Pandas, Financial Data Analysis* | [Live Demo](#) Jan 2026 – Mar 2026

- Built an ML model to forecast stock prices from real historical market data, engineering features including moving averages, volume trends, and momentum indicators
- Trained, evaluated, and iteratively improved model accuracy; visualized predictions against actual prices and deployed live online

Personal Developer Portfolio | *JavaScript, TypeScript, HTML/CSS, Vercel* | [Live Demo](#) Dec 2025 – Present

- Designed and built a fully responsive portfolio website from scratch using CSS Grid, Flexbox, and mobile-first responsive design principles
- Deployed via Vercel with custom animations and live project demo links; showcases 4 technical projects

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, Swift, HTML/CSS

AI & ML: LangChain, LangGraph, Groq API, PyTorch, Reinforcement Learning, Neural Networks

Frameworks & Tools: React Native, Git, GitHub, Xcode, Linux, VS Code

Currently Learning: SQL, Firebase
