Experience

Trillium Health Partners — Mississauga, ON
IT Operations (Software Development) — *May 2026 – Aug. 2026*

- Designed and deployed an internal clinical license operations portal in **Next.js**, **TypeScript**, and **Prisma**, replacing spreadsheet tracking for **1,000+ software licenses** with live capacity tracking, assignment workflows, and an **Action Queue**.
- Implemented request and lifecycle workflows with isolated staff/learner pools, role-based access control (**RBAC**), idempotent **n8n** intake with **Active Directory** validation, and append-only audit logging.
- Engineered an on-premises assistant using 4-bit quantized local models through **Ollama**, with context-window management and live inventory grounding to preserve data privacy; verified workflows with **Vitest** and **Playwright** test suites.
- Maintained **Sunbird dcTrack** and **Power IQ** infrastructure documentation while supporting enterprise backups, server maintenance, and data-center operations.

Career Education Council — Remote
App Developer — *Feb. 2024 – June 2024*

- Engineered **Scholars Spark**, an iOS application built with **Swift** and **Xcode** connecting students to academic resources; presented the prototype to industry professionals.
- Delivered weekly test-driven iterations based on mentor feedback, optimizing UI state transitions and local data persistence; earned **Swift proficiency certification**.

Projects

ResumeForge | GitHub | *Next.js, TypeScript, Prisma, Typst WASM, Playwright, Vitest* — *Aug. 2026 – Present*

- Building a local-first workspace that tailors a protected master resume to job postings, enforcing evidence grounding and blocking unsupported or uncited claims.
- Engineered deterministic job-description parsing and a 100-point ATS evaluation, enabling a sub-minute tailoring workflow through a BYOK AI patch gateway and **Typst WASM** preview with DOCX/PDF export.
- Architected and maintained robust test coverage with **350+ unit tests** and **80+ Playwright E2E specs**, including security tests for SSRF, redaction, and private-evidence isolation.

AI Stock Analyst Agent | GitHub | *React, JavaScript, Python, FastAPI, LangGraph* — *Summer 2026*

- Built and deployed a full-stack AI research agent synthesizing SEC 10-K/10-Q filings, historical market pricing, and live analyst sentiment into source-backed equity reports.
- Designed stateful tool-calling workflows in **LangGraph** with Groq/Gemini fallback routing and rate-limit handling, keeping BYOK credentials strictly server-side.

WC26 Travel Mapper | GitHub | *Next.js, TypeScript, Mapbox GL JS, Tailwind CSS* — *June 2026 – Aug. 2026*

- Developed and deployed a World Cup 2026 travel planner with multimodal routing, POI discovery, and flight search across 16 North American host cities.
- Proxied Mapbox Directions, Foursquare Places, and RapidAPI/Skyscanner behind Next.js server routes to shield API keys, cache external responses, and absorb third-party rate limits.

Education

Wilfrid Laurier University — Waterloo, ON
Bachelor of Science, Computer Science with Management Option — *Expected Apr. 2029*

- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming (Java), Database Management Systems (SQL), Linear Algebra, Calculus II

Technical Skills

Languages: TypeScript, Python, JavaScript, Java, Swift, SQL, HTML/CSS
Frameworks & Libraries: Next.js, React, Prisma, FastAPI, Tailwind CSS, Zod, Mapbox GL JS, WebGL
AI & LLM Systems: LangGraph, LangChain, Ollama, Tool Calling, Groq API, LangSmith, Local LLM Inference
Engineering & Systems: REST APIs, Playwright, Vitest, Docker, Git, GitHub Actions, n8n, Vercel, Linux, SQLite, RBAC, Active Directory
