

# Jayden Saha

Ontario, Canada | [Jaydensaha@yahoo.com](mailto:Jaydensaha@yahoo.com) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## EDUCATION

### Wilfrid Laurier University

Waterloo, ON

*Bachelor of Science, Computer Science with Management Option*

*Expected Apr. 2029*

- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming (OOP), Database Management Systems (SQL), Linear Algebra, Calculus II

## EXPERIENCE

### Trillium Health Partners

Mississauga, ON

*IT Operations Co-op*

*May 2026 – Aug. 2026*

- Maintained data-center asset, rack, and cabinet documentation using Sunbird dcTrack to support infrastructure visibility and inventory accuracy.
- Monitored power and infrastructure health using Power IQ; supported software updates, server maintenance, and data backup workflows.
- Collaborated with technical stakeholders in a reliability-sensitive healthcare IT environment to maintain enterprise infrastructure systems.

### Career Education Council

Remote

*App Development Intern*

*Feb. 2024 – Jun. 2024*

- Developed ScholarsSpark, an iOS application using Swift and Xcode that connects students with curated academic resources.
- Translated stakeholder requirements into functional features and tested and debugged the application to improve stability before deployment.

## PROJECTS

### AI Stock Analyst Agent | [GitHub](#) – Next.js, TypeScript, Python, FastAPI, LangGraph

May 2026 - June 2026

- Built and deployed a full-stack AI agent synthesizing financial statements, market data, analyst sentiment, earnings data, and SEC filing attribution.
- Designed tool-calling workflows for stock research and multi-ticker comparison using yfinance, Finnhub API, SEC EDGAR, and structured data pipelines.
- Engineered multi-provider LLM fallback routing (Groq, Gemini API) with rate-limit handling, BYOK credential isolation, and GitHub Actions automation.

### WC26 Travel Mapper | [GitHub](#) – Next.js 14, TypeScript, Mapbox GL JS, Tailwind CSS

Mar. 2026 - June 2026

- Built and deployed a full-stack web application for World Cup 2026 travel planning with interactive routing across 16 North American host cities.
- Integrated REST APIs (Mapbox Directions, Foursquare Places, RapidAPI/Skyscanner) for routing, flight search, and location-based recommendations.
- Developed server-side API routes to secure third-party keys and handle rate limits; deployed on Vercel with production environment configuration.

### OmniArchitect – Python, LangGraph, LangChain, Groq API, Local LLMs

Feb. 2026 – Mar. 2026

- Built a multi-agent AI orchestration system routing complex queries through specialized agents using LangGraph state-machine architecture.
- Integrated LLM tool calling, memory, context management, REST APIs, and both cloud and local inference for offline execution.

### Geometry Dash RL Agent – Python, PyTorch, Reinforcement Learning, Neural Networks

Jan. 2026 – Present

- Trained an autonomous game-playing agent using real-time game-state parsing, a custom artificial neural network (ANN), reward shaping, and hyperparameter tuning.

## TECHNICAL SKILLS

**Languages:** Python, TypeScript, JavaScript, Java, Swift, SQL, HTML/CSS

**AI/ML:** LangGraph, LangChain, LLM Tool Calling, Agentic Workflows, Groq API, Gemini API, PyTorch, Reinforcement Learning (RL), Neural Networks

**Frameworks & Tools:** Next.js, React, FastAPI, Git, GitHub, GitHub Actions, Vercel, Linux, REST APIs, Mapbox GL JS

**Data & Platforms:** yfinance, Finnhub API, SEC EDGAR, SQLite/JSON Caching, Data Pipelines, Firebase
